

Orianda Solutions AG - a valantic company

Asset Management with SAP – Swiss Made

Together with our team to success

Asset Management with SAP@Orianda

Years of experience combined with central competencies and suitable IT applications in the field of Asset Management. This is Orianda - Swiss Made!

A company's value creation process is largely dependent on the availability and reliability of its technical systems. A central component of this is a sustainable asset management that is precisely tailored to the specific processes of your company and therefore perfectly mapped technologically.

Since its foundation in 1998, Orianda has focused on asset management with SAP, taking the four strategic fields of action into account: Maintenance, service management, re-source deployment planning and spare parts management.

In our service portfolio (Figure 2) you will find all the relevant processes and applications that enable us to find the best possible solutions for you.

We digitize and mobilize your business processes in a future-oriented and sustainable way with the help of SAP standard solutions, based on the SAP Intelligent Asset Management Suite (Figure 3).

In doing so, we examine and recognize the potential of the latest technologies and innovations and always focus on the interests of our customers. Our expertise ranges from proven SAP solutions in SAP ERP or S/4HANA to the latest and most innovative SAP cloud solutions.

Based on our **Service Portfolio**, we develop your personal strategy and accompany you on your way to a successful Asset Management within the framework of a proven roadmap.

Analysis

In the course of the analysis, we support clients in recording the existing Asset Management systematically, evaluating it and identifying the potential for optimization.

Conception

In the course of the conception, we support our clients in designing the future Asset Management System, based on the results of the analysis and in building up a powerful asset management architecture.

Implementation

With the implementation we realize the concept, which was created on the basis of the analysis for the technological SAP-based Asset Management.

Operation

Once the implementation of the new Asset Management architecture with the go-live has been successfully completed, operation begins - as an ongoing task in which we also support our customers.

Introducing the Orianda Solutions AG - a valantic company

Based in Tägerwilien/Switzerland, Orianda has been a reliable strategic partner in SAP Asset Management for over 25 years, combining sophisticated SAP solutions with highly complex customer requirements. We are your certified partner for holistic end-to-end consulting in the context of SAP asset and maintenance management.

Our customers benefit from our experience and best-practice approaches and can be found in a wide range of industries, including transportation & logistics, mechanical and plant engineering, manufacturing, utilities, the public sector and pharmaceuticals & chemicals.

We have been part of the valantic family since March 2023 and, together with valantic, we want to implement the digital transformation to perfection. In doing so, we create strategic competitive advantages for our customers.

Together, we have the same standards for quality and added value for our customers.
